Wi-Fi Blocking Paint Evolves

Next up? Wi-Fi blocking clothing...

09:27AM Monday Oct 05 2009 by [Karl Bode](#)tags: [business](#) · [world](#) · [consumers](#) · [wireless](#)

For those who continue to believe that Wi-Fi signals either make them sick or contain secret messages from aliens, the [BBC notes](#) that evolutions in wireless-signal blocking paint now allow the paint to absorb frequencies transmitting at 100GHz. The paint developers are marketing the paint to the security conscious or theaters eager to shut up cell phone chatter. Next up? Wi-Fi blocking clothes. "We're assuming that excessive exposure could be bad for us," says creator Shin-ichi Ohkoshi. "Therefore we're trying to make protective clothes for young children or pregnant women to help protect their bodies from such waves."
